**Instructions  
for the use of the prophylactic hygienic product  
Regenerating Joints Spray  
SCHALI® Care Antiarthritis  
Orthopaedic diseases**

Regenerating Joints Spray SCHALI® Care Antiarthritis (Orthopaedic diseases) is a universal preventive hygienic agent for everyday regenerative care and is indicated for topical treatment of the joint area for the removal of inflammation.

**PRODUCT FORM:**

Aseptic antiseptic suspension for topical application. Polypropylene dispensers of 15 ml with a spray.

**INGREDIENTS:**

Contains eco-friendly bio-component of vegetable and mineral origin.  
Alcohol, titanium dioxide, purified water.

**MECHANISM OF ACTION:**

The photoactive composition based on the photosensitizing complex QD SCHALI® provides a highly efficient catalysis of reactive oxygen species (singlet oxygen). Reactive oxygen species promote oxygenation and improve blood supply and metabolic processes in tissues, stimulate the processes of recovery in the intercellular substance of the cartilaginous tissue, also restore the disturbed energy exchange in tissues, contributing to the strengthening of the immune response of the body.

The spray has both a general normalizing effect on the body and a pronounced local action at the site of application – anti-inflammatory, analgesic, regenerative, improves microcirculation. The regeneration of tissues is stimulated and the formation of chondrocytes is enhanced by stimulation of their mitosis (fission).

Restoration of energy exchange in cells results in stimulation of metabolic processes, microcirculation, oxygen saturation of tissues, thus quickly and effectively removing pain, swelling, stiffness, manifestation of meteorosensitivity in the joints, increasing the adaptive capacity of joints with intense physical exertion. It improves mobility of joints, stimulates recovery of bone and cartilaginous tissue, as well as soft tissues.

Regular use of the spray helps slow down degenerative changes in the cartilage and strengthen plastic processes, resulting in some restructuring of the cartilage.

The photoactive regenerating spray for joints SCHALI® Care Antiarthritis can also be used in photodynamic therapy (PDT) of musculoskeletal injuries in combination with laser light and other devices of instrumental therapy.

Hypoallergenic product.

**INDICATIONS:**

- arthritis
- arthrosis
- contractures
- polyarthritis
- ankylosing spondylitis
- traumatic arthritis

### **METHOD OF USE:**

The product is ready for use.

To accelerate the healing process and restore the skin, irrigate the surface of inflammation over the joints, fix gauze swabs moistened with the product.

### **SIDE EFFECTS:**

No side effects found.

No product dependence and no rebound syndrome.

### **STORAGE CONDITIONS:**

Keep the product in a dark cool place at the temperature below 15°C.

### **SHELF LIFE:**

Shelf life is 3 years from the date of production.

Do not use the product after expiration of the date of production, specified on the package.

Complex products of the **SCHALI® Care** series are made under license No. 286-S
