Regenerating Skin Care Spray
SCHALI® Care Dermic
Autoimmune and dermatological diseases**

Regenerating Skin Care Spray SCHALI® Care Dermic (autoimmune and dermatological systemic diseases) is a universal preventative hygienic aseptic, antiseptic agent for topical application in skin diseases of various origins.

PRODUCT FORM:

Aseptic antiseptic suspension for topical application. Polypropylene dispensers of 15 ml with a spray.

INGREDIENTS:

Contains eco-friendly bio-component of vegetable and mineral origin.
Alcohol, titanium dioxide, purified water.

MECHANISM OF ACTION:

The biocomponent of mineral origin in the aseptic suspension of the spray SCHALI® Care Dermic includes crystal lattice fragments of the complex QD SCHALI® of special class metalloid-semiconductors with unsaturated bonds, which is an element with increased catalytic activity. The mechanism of action of the product is based on the principle of energy neutralization of free chemical bonds on the surface areas of toxic compounds by their saturation with the help of complementary oxygen atoms produced as a result of the catalytic reaction.

Reactive oxygen species promote oxygenation and improve blood supply and metabolic processes in tissues, restore disrupted energy metabolism in tissues, enhancing the immune response of the body. This quickly and effectively removes pain, itching, irritation, swelling, increases the adaptive capacity of the body.

Regular application of the spray improves microcirculation and promotes the strengthening of regeneration processes in the epithelium. The regeneration of tissues is stimulated and the formation of chondrocytes is enhanced by stimulation of mitosis (fission).

The product is used both with prophylactic action and as a monotherapy during immunorehabilitation measures, in particular, with incomplete recovery after a disease, as well as in the complex therapy of a wide range of autoimmune systemic and dermatological diseases concomitantly with antibiotics and antiviral agents.

Regenerating spray SCHALI® Care Dermic can also be used in photodynamic therapy (PDT) of cutaneous manifestations of systemic autoimmune diseases in combination with laser light and other devices of instrumental therapy.

Hypoallergenic product.

INDICATIONS:

- Eczema
- Atypical dermatitis
- Psoriasis
- Systemic lupus erythematosus
- Rheumatoid arthritis
- Systemic scleroderma
- Autoimmune thyroiditis
- Skin care after cosmetic procedures (piercing, tattooing, depilation)
- Protection from germs in public places and in nature.

METHOD OF USE:

The product is ready for use.

To accelerate the healing process and restore the skin, irrigate the surface of inflammation, skin lesions and wounds, to tampon freely wounds and fistulous tracts, fix gauze swabs moistened with the product.

SIDE EFFECTS:

No side effects found.

No product dependence and no rebound syndrome.

STORAGE CONDITIONS:

Keep the product in a dark cool place at the temperature below 15°C.

SHELF LIFE:

Shelf life is 3 years from the date of production.

Do not use the product after expiration of the date of production, specified on the package.

Complex products of the **SCHALI® Care** series are made under license No. 286-S
